

# Water leak detector **SUCCESS ATP-434N**

leak detection

cable detection (graph)

## • Water leak detector is designed for:

- Water leak detection from **plastic and metal pipelines** underground **up to 6 m depth**
- Water leak detection **inside the house**

### Sensitive acoustic sensor AD allows to find the leak:

Under asphalt and concrete

By direct contact to the tube

By placing the sensor against the wall

### The standard set consists of:

- Receiver AP-027
- Acoustic sensor AD-227
- Carrying rod for AD-227
- Extension carrying rod for AD-227
- Contact rods for AD-227
- Magnet for AD-227
- Holder for AP-027
- Headphones
- Screwdriver
- Manual and passport
- Carrying case
- Electromagnetic sensor EMD-247

## • Cable detection mode:

Detection of energized cables **up to 6 m depth** Indirect measurement of the **depth**

### Features:

LCD display

Memory of 31 signal level

Graphic visualization of the signal

Protection from random acoustic noise

Light weight

Comfortable to wear for long terms

### Extra equipment:

**Acoustic sensor ADM-227** and rod ADM for leak survey at valves, hydrants and et.ct

**Magnetic base of ADM sensor** is also used for pipe diagnostics in hard-to-reach places and on the pipes of small diameter.
